## **DETAILED ACTION**

### ***Examiners Amendment / Allowance***

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Andrew Whitehead on 5/26/2011.

The application has been amended as follows:

Please amend the specification as follows:

### **SPECIFICATION:**

Please insert the following paragraph on page 1, after the title:

This application is a U.S. National Phase application of PCT/JP2005/005014 filed March 18, 2005, which claims priority to Japanese Patent Application No. 2004-083839, filed March 23, 2004 and Japanese Patent Application No. 2004-159213 filed May 28, 2004. The disclosure of each of the prior applications is hereby incorporated by reference in its entirety.

### ***REASONS FOR ALLOWANCE***

2. Applicants' arguments, see pages 2-8, filed 3/7/2011, with respect to claims 1-20, have been fully considered and are persuasive.
3. Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not appear to anticipate or render obvious the resulting lubricant base oil consisting essentially of a normal paraffin and an isoparaffin, and satisfying the following requirements (a), (b) and (c): (a)

an average carbon number  $N_c$  in one molecule is not less than 29 but not more than 35; (b) an average branch number  $N_b$  in one molecule, which is derived from a ratio of  $\text{CH}_3$  carbon to total carbon determined by  $^{13}\text{C}$ -NMR analysis and the average carbon number  $N_c$  in one molecule, is not more than  $(0.2N_c - 3.1)$  but not less than 1.5; and (c) a viscosity index is 145-170 and a kinematic viscosity at  $40^\circ\text{C}$  is  $17\text{-}25\text{ mm}^2/\text{s}$  which is outside the scope of prior art. ALDRICH (US PATENT 6008164) teaches lubricant base oil prepared from a hydrocarbon wax having a mixture of hydrocarbons that range from normal paraffins to highly branched paraffins (col. 3 lines 50-51). The mixture has a carbon chain length of about  $\text{C}_{20}$  to about  $\text{C}_{40}$ , and a free carbon index of said branched paraffins is at least about 3 (col. 2 lines 36-46). However, there is no teaching of a resulting relationship between  $N_c$  and  $N_b$  (i.e.  $N_b$  is based upon  $N_c$ ). A skilled artisan would recognize that ALDRICH teachings of a free carbon index does not describe or provide any reason or rationale for one of ordinary skill in the art to have come to an average branch number  $N_b$  in one molecule, which is derived from a ratio of  $\text{CH}_3$  carbon to total carbon determined by  $^{13}\text{C}$ -NMR analysis and the average carbon number  $N_c$  in one molecule, of not more than  $(0.2N_c - 3.1)$  but not less than 1; therefore, ALDRICH does not teach the present invention. Furthermore, applicant has confirmed the unexpected results that the lubricant base oil possesses with an average carbon number  $N_c$  in one molecule of not less than 29 but not more than 35, and with a kinematic viscosity at  $40^\circ\text{C}$  is  $17\text{-}25\text{ mm}^2/\text{s}$  (see Table A of the Declaration, Table 2 of the specification and Fig. 14 of the Journal article (Journal of the Japan Petroleum Institute – submitted by Applicant)).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
